Portfolio

Portfolio Value & Operations

Operating decisions across the estate: cost, service, productive use and asset value

Portfolio: Needs attention

3 simulated sites · 1 mini-grid / 1 cold room / 1 charging hub

Assessment scope & periods ↗

Operating-cost exposure

$3.31–3.97

Kobo · 30 min candidate runtime

Modelled + scenario · one-hour window

Service & product risk

2 sites

Cold-room excursion + interrupted charging

Measured events · financial loss unpriced

Productive-use opportunity

18–20 kW

Kobo · headroom on 3 of 5 days

Modelled · demand validation remains

Asset-life exposure

1 battery on watch

Reserve and high-power stress observed

30-day illustration · capacity unverified

Verified value recovered

Not established

Intervention outcomes need more evidence

Completed work does not establish savings

3 priority sites · **1** opportunity · **3** site evidence gaps · **3** accepted actions

Distinct consequence categories · no combined savings total

Where management should act first

Findings ranked by consequence and urgency, with evidence confidence alongside.

6 FINDINGS

All priorities | Cost | Risks | Opportunities

6 findings

SITE	FINDING / OPERATING MECHANISM	VALUE / CONSEQUENCE	PRIORITY	CONFIDENCE	ACTION / NEXT MOVE
GreenHarvest Cold-chain	**Backup response failed** F-118 · Automatic start failed; cooling interrupted	**Product conditions exposed** Measured peak 8.2°C · loss unpriced 6 Oct · 19:00–20:00	High	High Observed sequence	**ACT-051** Witness an automatic-start test Open
Kobo Mini-grid	**Extended generator support** F-104 · 30 min candidate; charging trade-off remains	**$3.31–3.97** Modelled fuel + scenario maintenance 6 Oct · 14:20–15:20	High	Low ⓘ PCS capability gap	**ACT-048** Verify the policy trial Outcome pending
Depot EV charging	**Charging session interrupted** F-130 · Fault-aborted session; root cause unknown	**1 interrupted session** Measured events · revenue loss unpriced 6 Oct · 08:00–16:00	Medium	Medium ⓘ 1 other outcome unknown	**ACT-061** Investigate connector 2 Open
GreenHarvest Cold-chain	**Temperature excursion** F-119 · Chamber above 4°C after backup failed	**25–35 min above policy** Measured peak 8.2°C · no spoilage determination 6 Oct · 19:00–20:00	Medium	High Stock and loading not recorded	**Review recommendation** Record stock and connect the door log Open
Kobo Mini-grid	**Battery output-limit report missing** F-108 · One 14:50 report absent from the battery controller	**30 min unclassified** Evidence gap · limits F-104 6 Oct · 14:20–15:20	Medium	High Reporting cause unknown	**ACT-049** Restore battery-limit reporting Open
Kobo Mini-grid	**Productive-use headroom** F-109 · Recurring renewable capacity available	**18–20 kW usable** Modelled headroom · $2.50 scenario sales Separate 5-day study · 3 eligible days	Medium	Medium ⓘ Demand not established	**Review recommendation** Evaluate a 10 kW productive load Recommendation

Priority and confidence answer different questions.

Objectives across the estate

Operating condition, not a composite health score

Objective	Kobo	Cold room	Depot
Service / product	Unknown	Attention	Attention
Backup	Unknown	Degraded	N/A
Asset condition	Watch	Investigate	Unknown
Cost control	Review	Unassessed	Unassessed
Evidence	Limited	Limited	Limited

Site-owned assessments · Unknown is not healthy.
N/A means no configured objective. Select any cell for context.

Evidence that would change a decision

Restore Kobo's missing PCS capability report to resolve two indeterminate dispatch intervals.

Inspect the constraint →

GROW USEFUL DEMAND

An opportunity beyond reducing cost

Scenario

10 kW × 1 h
Grain-mill evaluation at Kobo

→

$2.50
Scenario gross sales per eligible window

Within 18–20 kW headroom · $0.25/kWh assumed tariff · before costs. Validate demand and service guardrails before committing.

Review opportunity Finding →

Inspect physical headroom →

CLOSE THE LOOP

What changed in this review

Inspect basis ↗

- **1 maintenance activity completed** — Outcome unverified
- **1 policy trial awaiting outcome evidence** — Guardrails incomplete
- **0 verified resolutions in these examples** — Value not yet recovered

Observed change → comparable evidence → verified outcome → eligible financial value

Business context: Depot delivered **120 kWh** in complete records; **$36.00** scenario tariff estimate. Inspect energy basis →

Other sites lack comparable full-window energy coverage.

Canonical basis: v6.9 8.1 / 8.8 / 8.9; Client Demo Recommendation Screen 1 / A1 · **Question:** Where should management act first, what is at stake, and what would prove improvement?
Preserved: Finding-owned ranked rows; Site / Finding / Action root changes; Action references confined to the Action column. Financials reuses site-owned consequences; unknowns and claim limits remain explicit.
Adapted: A1 business-value hierarchy above the canonical priority table. Three existing sites; objective matrix instead of ungrounded percentages; productive-use and verification visible together. Counts are secondary context.
Deferred: Six-site estate, monthly extrapolation, productive-use share, comparable energy roll-up, asset valuation, reconciliation residual and verified recovered money require their own supporting records. None is inferred from this hour.
