Portfolio

Portfolio Value & Operations

Operating decisions across the estate: cost, service, productive use and asset value

Portfolio: Needs attention

3 simulated sites · 1 mini-grid / 1 cold room / 1 charging hub

Assessment scope & periods ↗

Grow revenue →

Capture more value from existing infrastructure and expand earning potential

18–20 kW unused

Productive use at Kobo · idle chargers at Depot · site income not recorded

Kobo · GreenHarvest · Depot

Opportunities · revenue not measured yet

Optimize cost and efficiency →

Eliminate avoidable expenditure and get more output from operational resources

$3.31–3.97

Kobo generator time, 1 trial in hand · 3 repair visits without a result at GreenHarvest, cost not recorded

Kobo · GreenHarvest · Depot

Modelled + scenario · one-hour window · reliability checked as a safeguard

Protect asset and capital →

Preserve asset value, avoid premature replacement and reduce service disruption

2 sites disrupted

Cold-room exposure · interrupted charging · 4 early warnings on battery, generator, charger and backup · Depot peak at 95% of its limit

Kobo · GreenHarvest · Depot

Measured events and early warnings, counted separately · loss not priced

Assure performance and returns →

Establish with defensible evidence whether the infrastructure is delivering expected results

Not established

No verified result yet · no targets declared · evidence gaps at all 3 sites

Kobo · GreenHarvest · Depot

Completed work does not establish savings

3 priority sites · **1** opportunity · **3** site evidence gaps · **3** accepted actions · **8** warnings not yet priced

Distinct consequence categories · no combined savings total

Where management should act first

Findings ranked by consequence and urgency, with evidence confidence alongside.

6 FINDINGS

All priorities | Cost | Risks | Opportunities

6 findings

SITE	FINDING / OPERATING MECHANISM	VALUE / CONSEQUENCE	PRIORITY	CONFIDENCE	ACTION / NEXT MOVE
GreenHarvest Cold-chain	**Backup response failed** F-118 · Automatic start failed; cooling interrupted Protect asset and capital · Optimize cost and efficiency	**Product conditions exposed** Measured peak 8.2°C · loss unpriced 6 Oct · 19:00–20:00	High	High Observed sequence	**ACT-051** Witness an automatic-start test Open
Kobo Mini-grid	**Extended generator support** F-104 · 30 min candidate; charging trade-off remains Optimize cost and efficiency · Protect asset and capital	**$3.31–3.97** Modelled fuel + scenario maintenance 6 Oct · 14:20–15:20	High	Low ⓘ PCS capability gap	**ACT-048** Verify the policy trial Outcome pending
Depot EV charging	**Charging session interrupted** F-130 · Fault-aborted session; root cause unknown Protect asset and capital · Grow revenue	**1 interrupted session** Measured events · revenue loss unpriced 6 Oct · 08:00–16:00	Medium	Medium ⓘ 1 other outcome unknown	**ACT-061** Investigate connector 2 Open
GreenHarvest Cold-chain	**Temperature excursion** F-119 · Chamber above 4°C after backup failed Protect asset and capital	**25–35 min above policy** Measured peak 8.2°C · no spoilage determination 6 Oct · 19:00–20:00	Medium	High Stock and loading not recorded	**Review recommendation** Record stock and connect the door log Open
Kobo Mini-grid	**Battery output-limit report missing** F-108 · One 14:50 report absent from the battery controller Assure performance and returns · Optimize cost and efficiency	**30 min unclassified** Evidence gap · limits F-104 6 Oct · 14:20–15:20	Medium	High Reporting cause unknown	**ACT-049** Restore battery-limit reporting Open
Kobo Mini-grid	**Productive-use headroom** F-109 · Recurring renewable capacity available Grow revenue · Optimize cost and efficiency · Protect asset and capital	**18–20 kW usable** Modelled headroom · $2.50 scenario sales Separate 5-day study · 3 eligible days	Medium	Medium ⓘ Demand not established	**Review recommendation** Evaluate a 10 kW productive load Recommendation

Early warnings · not priced yet

Risk — **Repeated maintenance without a result**
GreenHarvest · Optimize cost and efficiency · Backup generator visited 3 times in 60 days (14 Aug, 18 Sep, 6 Oct); the automatic start still failed

Early warning — **Battery below its reserve**
Kobo · Protect asset and capital · 5 of the last 30 days · lowest 22%

Early warning — **Backup start test overdue**
GreenHarvest · Protect asset and capital · Monthly test due 2 Oct, not done

Early warning — **Charger fault and overdue inspection**
Depot · Protect asset and capital · Connector 2 fault on 6 Oct · inspection overdue since 30 Sep

Open all Findings →

Priority and confidence answer different questions.

Outcomes across the estate

How each site is doing on what matters

	Kobo	GreenHarvest	Depot
Grow revenue	Opportunity · Productive electricity sales	Not measured yet · Paid cold-room use	Watch · Charger use
Optimize cost and efficiency	Needs attention · Supply cost per kWh	Needs attention · Cost per cooling unit	Not measured yet · Energy cost per km
Protect asset and capital	Watch · Battery and generator life	Needs attention · Stock kept saleable	Needs attention · Buses ready to run
Assure performance and returns	Watch · Evidence quality	Watch · Evidence quality	Watch · Evidence quality

Needs attention · Watch · Opportunity · On track · Unknown · Not measured yet

Evidence that would change a decision

Restore Kobo's missing PCS capability report to resolve two indeterminate dispatch intervals.

Inspect the constraint →

GROW USEFUL DEMAND

An opportunity beyond reducing cost

Scenario

10 kW × 1 h — Grain-mill evaluation at Kobo → **$2.50** — Scenario gross sales per eligible window

Within 18–20 kW headroom · $0.25/kWh assumed tariff · before costs. Validate demand and service guardrails before committing.

Review opportunity Finding → | Inspect physical headroom →

CLOSE THE LOOP

What changed in this review

Inspect basis ↗

- 1 maintenance activity completed — Outcome unverified
- 1 policy trial awaiting outcome evidence — Guardrails incomplete
- 0 verified resolutions in these examples — Value not yet recovered

Observed change → comparable evidence → verified outcome → eligible financial value

Business context: Depot delivered **120 kWh** in complete records; **$36.00** scenario tariff estimate. Inspect energy basis →

Other sites lack comparable full-window energy coverage.

Canonical basis: v6.9 8.1 / 8.8 / 8.9; Client Demo Recommendation Screen 1 / A1 · **Question:** Where should management act first, what is at stake, and what would prove improvement?
Preserved: Finding-owned ranked rows; Site / Finding / Action root changes; Action references confined to the Action column. Financials reuses site-owned consequences; unknowns and claim limits remain explicit.
Adapted: A1 business-value hierarchy above the canonical priority table. Three existing sites; objective matrix instead of ungrounded percentages; productive-use and verification visible together. Counts are secondary context.
Deferred: Six-site estate, monthly extrapolation, productive-use share, comparable energy roll-up, asset valuation, reconciliation residual and verified recovered money require their own supporting records. None is inferred from this hour.
